This sequence is encoded by the full length cDNA encoding the human AMP-activated protein kinase gamma 3 subunit (PRKAG3). Detecting the presence of the PRKAG3 DNA, or a variant, is useful in determining a risk estimate of a metabolic disease, such as diabetes or obesity, in a subject. The variation may occur in exons 3, 4 or 10. In exon 3 variation may be a substitution of a G for a C at nucleotide 320, resulting in the amino acid substitution PD1A; in exon 4 variation may be a substitution of a T for a C at nucleotide 550; and in exon 10 variation may be a substitution of a T for a C at nucleotide 1037, resulting in the amino acid substitution R340W. There may also be nucleotide variation in intron 6. The numbering of these variations is based on the full length cDNA, rather than on position 1 of the open reading frame.
                                                                                                                                                                                                                                                                                                                                                                                  0;

WPI; 2001-244810/25. N-PSDB; AAD03320. New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and myopathy

Claim 5; Fig 3; 71pp; English.

The present sequence is human adenosine monophosphate (AMPY) acquired kinese (AMPK) gamma subunit muscle-specific isoform, complete PRRAG3. Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRRAG3 is useful as therapeutic for treating carbohydrate metabolism disorders associated with muscle metabolism such as myopathy and disorders associated with muscle metabolism activity, and for restoring a normal AMPK function. PRRAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect useful for defecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3.

Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate ARCH activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain a genetic polymorphic marker linked to a sequence encoding PRKAG3,

The present sequence is pig adenosine monophosphate (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform, PRKAG3 splice variant. PrkAG3 gene is located in the RN locus of chromosome 15.

Wutation in PrkAG3 gene is located in the RN locus of chromosome 15.

Mutation in PrkAG3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder. Preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered with PRKAG3 or a function and some content of the present of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    41 AVTSSSERIRGKRRAKALRWTRQKSVEEGEPPGQGEGPRSRPAAESTGLEATFPKTTPLA 100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              QADP-AGVGTPPTGWDCLPSDCTASAAGSSTDDVELATEFPATEAWECELEGLLEERPAL 159

Nucleic acid encoding PRRAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRRAG3 and is useful in gene therapy.
                                                                                                                                                                                                                                                    New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               6 LEQALRRVPGSRGGWELEQLRPEGRGPTTADTPSWSSLGGPKHQEMSFLEQGESRSWPSR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    86 SIGLEATFPKTIPLAQADP-AGVGTPPTCWDCLPSDCTASAAGSSTDDVELATEFPATEA 144
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 26 MSFLEQENSSSWPSPAVTSSSERIRGKRRAKALRWTRQKSVEEGEPPGQGEGPRSRPAAE 85
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Screening animals to determine those likely to produce larger litters and improved meat quality traits involves assaying for the presence of polymorphisms in the AMP activated protein kinase regulatory gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRRAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRRAG3 polymorphic variant (PRRAG3-30).
                                                                                                                                                                                                                                   AMP activated protein kinase regulatory gamma subunit; PRKAG3 gene; screening; meat quality; single nucleotide polymorphism; SNP; pig;
                                                                                                                                                                                                                                                                                                                                                                   /note= "Wild type Asn is substituted with Thr due to single nucleotide polymorphism (SNP)"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is pig adenosine monophosphate (AMPF) activated kinase (AMPK) gamma subunit muscle-specific isoform, complete PRKAG3. Prekag3 gene is located in the RN locus of Ghromosome 15. Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as
                                                                                                                                                                                                                                                                                                                                                                            heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                         for detecting a dysfunction of carbohydrate metabolism resulting
                                                                          New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and
                                                                                                                                                                                                                                                                                                evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRRAG3, are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein scharacterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRKAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger likely to The present sequence is pig wild-type PRKAG3 protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             IPDTMLEIKKAFFALVANGVRAAPLWDSKKQSFVGMLTITDFILVLHRYYRSPLVQIYEI
                                                                                 The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRRAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRRAG3 polymorphic variant (PRRAG3-199).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "Wild type Arg is substituted with Gln due to single nucleotide polymorphism (SNP)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26 MSFLEQENSSSWPSPAVTSSSERIRGKRRAKALRWTRQKSVEEGEPPGQGEGPRSRPAAE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein kinase regulatory gamma subunit (PRKAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRKAG3 polymorphic variant (PRKAG3-52).
                                                                                                                                                                                                                                                                                                                   /note= "Wild type Gly is substituted with Ser due to single nucleotide polymorphism (SNP)"
                                                                                                                                                          AMP activated protein kinase regulatory gamma subunit; PRKAG3 screening; meat quality; single nucleotide polymorphism; SNP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         79.0%; Score 2005; DB 23; Length 464; 85.8%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method for screening animals to determine those more likely to produce large litters and improved meat quality traits. The method involves assaying for the presence of a genotype in the sample of genetic material obtained from animal. The genotype is characterised by polymorphism(s) in the AMP activated protein Kinase requiatory gamma subunit (PRKAG3) gene. The method is used for screening animals e.g., pigs to determine those most likely to exhibit improved meat quality traits and to produce larger litters. The present sequence is pig PRKAG3 polymorphic variant (PRKAG3-200).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5;

evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRRAG3, are useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3. Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a PrKag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; gamma subunit; adenosine monophosphate-activated kinase; AMPK; prekKA3; diabetes, obesity; myopathy; cardiovascular disease; anorectic; genetic testing; carbohydrate metabolism disorder; skeletal muscle; cystathione beta synthase; CBS; cardiant; gene therapy; mutant; mutein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ooft C, Kalm E, Milan D, Robic A, Rogel-Gaillard C; Gellin J, Le Roy P, Chardon P;
   The present sequence is human adenosine monophosphate (AMP)-activated kinase (AMPK) gamma subunit muscle-specific isoform, PRKAG3. Mutation in Prkag3 results in an altered regulation of carbobhydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.

Note: The present sequence is not shown in the specification, but is derived from the human Prkag3 sequence SEQ.ID.NO.4 shown in page 57-58 of sequence listing (AAE00221).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 185 MRFWQEHTCYDAMATSSKLVIFDTMLEIKKAFFALVANGVRAAPLWDSKKQSFVGMLTIT 244

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3.
                                                                                                                                                                       New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and
                                                                                                                                                                                                                                                                                              The present sequence is a V40I mutant of human muscle-specific isoform of gamma subunit of adenosine monophosphate (AMP)-activated kinase (AMPK) Prkag3. This mutant sequence results in decreased glycogen content in human skeletal muscle.
                                                                                     Rogel-Gaillard C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                 Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as
                                                                                                                                                                                                                                                                                                                                                                                                                    diabetes, obesity, and disorders associated with muscle metabolism such as myopthy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ·,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 305;

Transgenic animal and host cell transformed with PRKAG3 or a heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.

Note: The present sequence is not shown in the specification, but
                                                                                                                                                                                                                                                                                                                                                                               Human: gamma subunit; adenosine monophosphate-activated kinase; AMPK; PRKAG3; diabetes; Obesity; myopathy; cardiovascular disease; anorectic; genetic testing; carbohydrate metabolism disorder; skeletal muscle; cystathione beta synthase; CBS; cardiant; gene therapy; mutant; mutein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mutation in Prizag results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are useful for detecting a dysfunction of carbohydrate metabolism resulting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Rogel-Gaillard C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is a R41Q mutant of human muscle-specific isoform
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              of gamma subunit of adenosine monophosphate (AMP)-activated kinase (AMPK) Prkag3. This mutant sequence results in increased glycogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              from the expression of a functionally altered allele of PRKAG3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note= "Wild-type Arg substituted with Gln"

```
(AMP) activated kinase (AMPK) gamma rubunit muscle-specific isoform, perkad3 pred is located in the RN locus of chromosome 15.

Mutation in Prkad3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PRKAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PRKAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder. Preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRKAG3, are cuseful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DFILVLHRYYRSPLVQIYEIEQHKIETWREIYLQGCFKPLVSISPNDSLFEAVYTLIKNR 304

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    heterotrimeric AMPK consisting of PRRAG3 or its mattant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRRAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRRAG3 and is useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                         monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and

This mutant sequence results in decreased glycopen content in pig skeletal muscle.

Wutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PKRAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as diabetes, obesity, and disorders associated with muscle metabolism such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PKRAG3 sequence and its functionally altered mutants are useful for the diagnostic evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     484
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            09
                        useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3.

Transgenic animal and host cell transformed with PRKAG3 or a present of consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of PRKAG3 and is useful in gene therapy.

Note: The present sequence is not shown in the specification, but is derived from the porcine Prkag3 sequence shown in Fig 2 (AABO0220).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pig; gamma subunit; adenosine monopnospinate-activated names.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               heterotrimeric AMPK consisting of PRKAG3 or its mutant, are useful for screening compounds able to modulate AMPK activity. Nucleic acid encoding PRKAG3 is useful for detecting mutations in a Prkag3 gene, or in a sequence encoding the first cystathione beta synthase (CBS) domain of prkAG3 and is useful in gene therapy.

Note: The present sequence is not shown in the specification, but is derived from the porcine Prkag3 sequence shown in Fig 2 (AAE00220).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  useful for detecting a dysfunction of carbohydrate metabolism resulting from the expression of a functionally altered allele of PRKAG3. Transgenic animal and host cell transformed with PRKAG3 or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New variants of the gamma subunit of vertebrate adenosine monophosphate-activated kinase for diagnosis or treatment of disorders associated with energy metabolism such as diabetes, obesity, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         evaluation, genetic testing and prognosis of a metabolic disorder, preferably a carbohydrate metabolism disorder. Primers that can detect a genetic polymorphic marker linked to a sequence encoding PRRAG3, are
                                                                                                                                                                                                                                                                                                                                                                     Rogel-Gaillard C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a R410 mutant of muscle-specific isoform of gamma subunit of adenosine monophosphate (AMP)-activated kinase (AMFX) Prkag3 from Sus scrofa. This mutant sequence results in increased glycogen content in pig skeletal muscle.

Mutation in Prkag3 results in an altered regulation of carbohydrate metabolism, particularly in skeletal muscle. PrkAG3 is useful as therapeutic for treating carbohydrate metabolism disorders such as such as myopathy and disorders associated with muscle metabolism such as such as myopathy and cardiovascular diseases, to modulate AMPK activity, and for restoring a normal AMPK function. PrkAG3 sequence and its functionally altered mutants are useful for the diagnostic

N.Alternate names: CAT3 protein; protein G2945; protein YGL115w
C.Species: Saccharomyces cerevisiae
C.Date: 30-Jun-1989 #sequence_revision
C.Accession: A38906; JT0316; S48508; S64125

Science 288:1248-1251(2000).

1. Science 288:1248-1251(2000).

2. FUNCTION: AMPK IS RESPONSIBLE FOR THE REGULATION OF FATTY ACID SYNTHESIS BY PHOSPHORYLATION OF ACETY-COA CARBOXYLASE. ALSO REGULATES CHOLESTEROL SYNTHESIS VIA PHOSPHORYLATION AND INACTIVATION OF HYDROXYMETHYLGLUTARYL-COA REDUCTASE AND HORMONE-SENSTIVE LIPASE. THIS IS A REGULATORY SUBBUILT. IT MAY PLAY A ROLE IN THE REGULATION OF ENERGY METABOLISM IN SKELETAL MUSCLE.

2. SUBUNIT: HETEROTRIMER OF AN ALPHA CATALYTIC SUBUNIT, A BETA AND A GAMAN NOW-CATALYTIC REGULATORY SUBUNITS.

2. TISSUE SPECIFICITY: MUSCLE.

3. DISBASE: DEFECTS IN PRAGA3 (RN-) ARE ASSOCIATED WITH EXCESS GLICOGEN COMPENT GABOUT 70% IN SKELETAL MUSCLE. THIS MUTATION ORIGINATED IN THE HAMPSHIRE BREED PIGS AND HAS BENEFICIAL EFFECTS.

3. ON MEAT CONTENT BUT DETAINBUNAL BFFECTS ON PROCESSING YIELD. THUS, THIS MUTATION IS OF CONSIDERABLE ECONOMIC SIGNIFICANCE IN THE PIG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. WPWS can be associated with a form of hypertrophic cardiomyopathy (HCM), which is probably due to polysaccharide storage in the heart. Defects in PRKAG2 may not be a frequent cause of HCM where no features of pre-excitation are found in affected individuals. SIMILARITY: BELONGS TO THE 5'-AMP-ACTIVATED PROTEIN KINASE, GAMMA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Z

"Molecular characterization of KISNF4 gene.";
Submitted (APR-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: THIS PROTEIN CAUSES EXPRESSION OF GLUCOSE-REPRESSIBLE
GENES UPON GLUCOSE DEPRIVATION. IT INTERACTS AND HAS FUNCTIONAL
RELATIONSHIP TO THE PROTEIN-KINASE SNF1 (BY SIMILARITY).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SENSITIVE LIPASE. THIS IS A REGULATORY SUBUNIT. SUBUNIT: HETEROTRIMER OF AN ALPHA CATALYTIC SUBUNIT, A BETA AND A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GAMMA NON-CATALYTIC REGULATORY SUBUNITS.
SIMILARITY: BELONGS TO THE 5'-AMP-ACTIVATED PROTEIN KINASE, GAMMA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      homologs of proteins that interact with yeast Snfl protein kinase.";
J. Biol. Chem. 269:29343-29346[1994).
-!- FUNCTION: AMPK IS RESPONSIBLE FOR THE REGULATION OF FATTY ACID
SYMTHESIS BY PHOSPHORYLATION OF RETYL-COA CARBOXYLASE. ALSO
REGULATES CHOLESTEROL SYNTHESIS VIA PHOSPHORYLATION AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           INACTIVATION OF HYDROXYMETHYLGLUTARYL-COA REDUCTASE AND HORMONE-
